-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Detailed Action

The following is a statement of reasons for the indication of allowable subject matter: claims 2, 8 and 15 are allowable because they comprise the limitation of one arc shape step in the stepped sidewall.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3-7, 9-14, 16-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Lee (5,932,378).

Lee teaches all of the limitations of these claims, see Fig. 3C and 5D.

The applicant discusses the limitations of the prior art in that alternating phase shift photomasks are related to conventional photomasks that employ a patterned opaque material layer upon a transparent substrate to provide alternating transmissive regions and non-transmissive regions of the transparent substrate. However, alternating phase shift photomasks also employ a pit within alternating transmissive regions of the transparent substrate separated by the patterned opaque material layer. The pit is typically formed of a depth to provide a

180 degree phase shift of a photoexposure light beam for adjacent transmissive regions when employing the phase shift photomask.

While alternating phase shift photomasks are common and highly desirable in the microelectronic product fabrication art, they are nonetheless not entirely without problems. In that regard, while alternating phase shift photomasks do provide enhanced resolution of photoexposure light, they nonetheless also often provide the enhanced resolution with attendant optical asperities, such as ghost images.
